

Complete Project Control Solution Designed for Construction Businesses

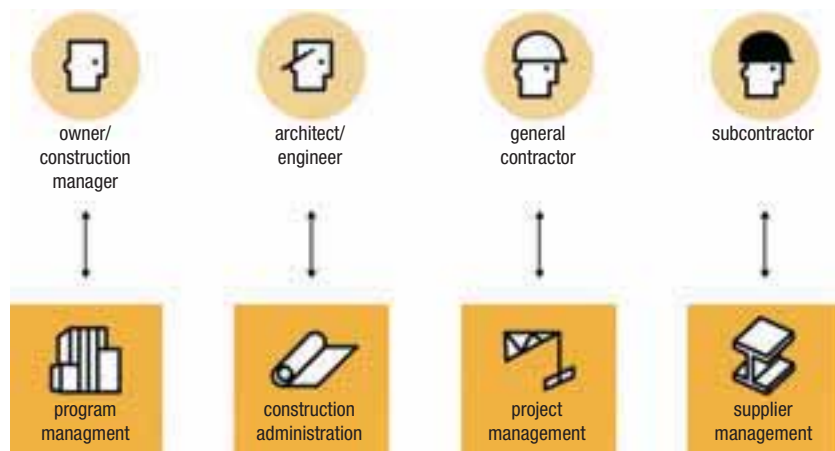

Meridian Systems provides enterprise solutions that optimize the plan, build and operate phases of construction projects and programs. Meridian technology enables improved top-line revenue and reduced capital construction costs.

The goal of general contractors and subcontractors is to increase volume, margin and profitability. Prolog Application Suite from Meridian Systems is the leading project management software that allows contractors to control construction costs and increase top-line revenue, effectively improving the bottom line. In fact, among general contractors with more than \$100 million in revenue, Prolog is the favorite, because it offers a complete project control solution that is designed for their business.

Prolog delivers in-depth project management features across projects and programs in the areas of: collaboration, purchasing management, cost control, document management and field administration. By automating the plan and build phases of the construction project lifecycle—from design to close out, organizations can:

- reduce risk by tracking projects more effectively and consistently using the robust Prolog dashboard capabilities;

Prolog automates all aspects of the project lifecycle, from design to close out.

- reduce project schedules by collaborating more effectively with the project team;
- manage multiple projects in one database to generate summary reports and queries across all projects;
- improve document control by streamlining the review process, tracking revisions and storing master files;
- make critical decisions quickly using accurate information from individual projects and complete programs; and
- do more with less, and make existing staff more efficient.

Created by project control software experts, Prolog speaks construction language and offers the functionality construction organizations need to automate, streamline and standardize essential processes. Prolog helps to increase timely communication

Prolog deploys quickly and easily, yet offers robust functionality and in-depth customization.

and improve decision-making, enabling better accountability and response time. Prolog automates these and many other processes:

- automatically receive notification of pending action items that the project team needs to take action on with Prolog Auto Alerts;
- manage scopes of work (including all inclusions, exclusions, alternates, addenda, drawings, specs and special pricing), create bid packages, send invitations to bid with all necessary attachments, perform a side-by-side bid analysis, and then automatically create a contract or purchase order based on the vendor/subcontractor that won the bid with the Prolog Purchasing Module;
- run metrics on a portfolio of

projects with a single click; save time from entering individual projects and multiple packages using the Reports Manager; and

- easily track key performance indicators across all projects in the organization; and identify problems or risks before they impact the bottom line with the Prolog Dashboard.

Built on the Microsoft SQL Server database platform, Prolog Manager delivers robust and reliable performance. In addition, Meridian offers a product-specific software developer's kit to enable intelligent integration of the Prolog Manager cost-control module with other critical business systems. Extend the value of a project management system by integrating Prolog with applications, such as Microsoft Word, Microsoft Project, SureTrak Project Manager, PeopleSoft EnterpriseOne, Timberline Accounting, CGC eCMS and others.

By standardizing on Prolog, general contractors and subcontractors can maintain project control and increase volume, margin and profitability as the number of complex projects and programs increases.
